

SafeMoonMax WhitePaper

Maximized SafeMoonMax tokenomics. Missed an earlier ascent to the moon? Take advantage of another opportunity to reach the stars with SafeMoonMax.

Much like Dogecoin, EthereumMax, SafeMoon Protocol surely has made an impact in the crypto world. However, anyone in the crypto world understands things change at lightspeed. SafeMoonMax is the smart contract set to maximally accomplish the success of SafeMoon.

SafeMoonMax is a decentralized finance (DeFi) token on the BSC that will focus on three functions during every trade: Holder Incentivization, LP Lock & Growth and Strategic Supply Burn/Depletion.

Holder Incentivization

Be rewarded for holding your tokens over time. Of course the longer tokens are held, the more rewards accumulated. Rewards will be relative to the amount being held and trading conditions at that moment.

Programmed Liquidity Pool Lock & Growth

Much like SafeMoon Protocol, LP is automatic. Built into the smart contract the automatic LP will assist in maintaining Maximally safe SafeMoonMax price floors. This maintenance benefits holders by keeping SafeMoonMax price levels stable because of the overall liquidity of the token. Strategic Supply Burn/Depletion

Plainly stated, beyond the initial burn, more strategic token burns will be performed to create conditions Maximally advantageous for SafeMoonMax holders.

SafeMoonMax Tokenomics In Depth

Automatic liquidity protocol: SafeMoonMax automatic liquidity protocol is designed to create long-term stability. For every transaction, the SafeMoonMax smart contract charges a 10% fee, which is then divided as follows:

5% is split among existing holders.

2.5% is automatically converted into Binance Coin (BNB).

2.5% is paired with the BNB to serve as a liquidity pair on the PancakeSwap decentralized exchange (DEX).

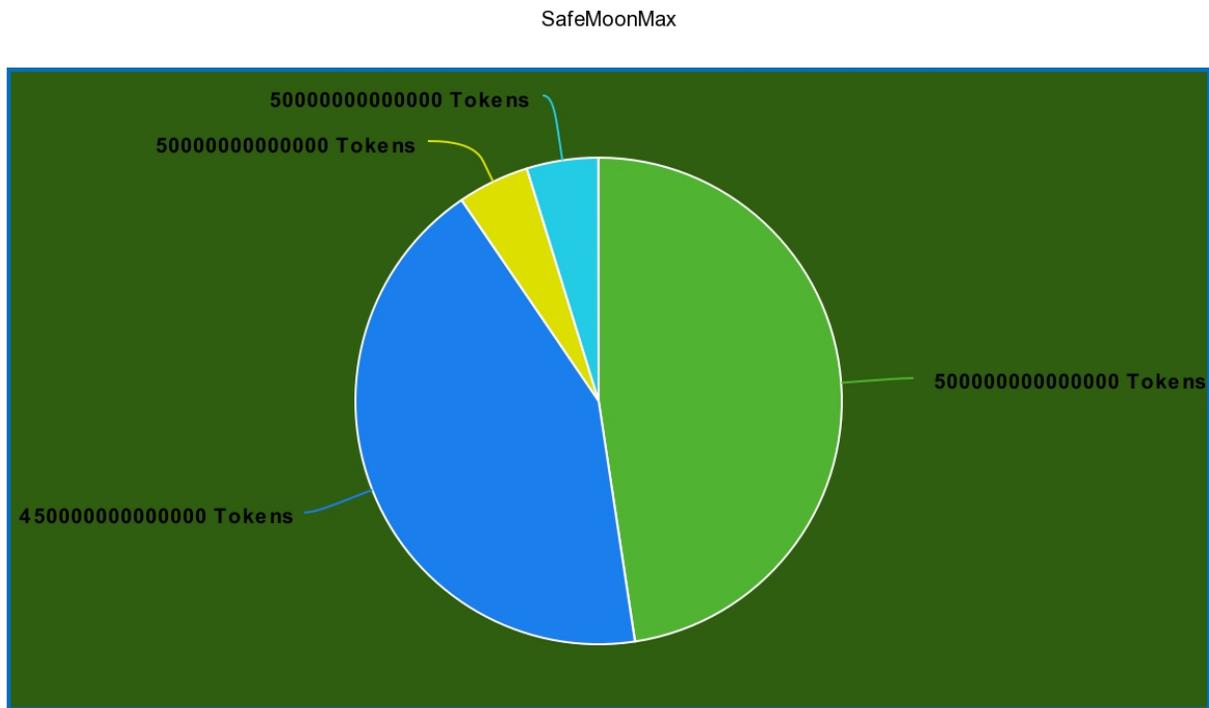

Through this mechanism, SafeMoonMax aims to provide a solid price floor with a degree of arbitrage resistance. In principle, the automatic liquidity protocol prevents huge dips when early investors sell off their positions, thereby protecting holders and newer investors from the worst of price fluctuations.

Coin Info

- Token Name: SafeMoonMax
- Token Symbol: SAFEMOONMAX
- Token Type: BEP20
- Total Supply: 1,000,000,000,000,000

SAFEMOONMAX

- 10% tx cost
- 5% redistribution to holders • 5% locked liquidity
